## New Product Release: Nextup Controller

Designed for off-road competition, the Nextup Controller represents a fully tuneable upshifter. This dynamic product can be used with an air-shifter for drag racing or with a shift sensor for road racing. Able to tap into the gear position sensor found on modern road bikes, the unit gives customers two types of tuning for each gear position. The end result is fast and smooth upshifts.

Product highlights include:

- ▶ Push button setup for Engine Kill and Valve Delay times.
- ▶ Easy to read LED display.
- ▶ Input for gear position sensor lets you tune the upshift for each gear position.
- ▶ Works on fuel injected and carbureted motorcycles / ATV's
- ▶ Plated terminal screws for simple connections
- ▶ Minimal weight and compact size.

With an MSRP of \$249.95 the Nextup Controller offers features not currently available on the market at an unbeatable price. Order yours today!

## In Praise of Charles Kosa

Charles Kosa, former Director of Marketing, passed away in February after being diagnosed with cancer. The staff at Biperformance mourns the passing of our dear colleague and friend. An astute engineer and businessman Charles shared with us a great wealth of knowledge and experience. He had friends and business contacts around the world. His upbeat nature and passion for motorcycling always kept everyone in good spirits. He will be greatly missed.
